About me

I am a dynamic IT professional who embarked on a journey in 2007 as a project manager, eventually ascending to the role of a **business unit manager**. In 2018, I made a transformative shift into the world of coding, graduating from computer science school and specializing as a senior **full-stack .NET developer** since then. Aside from that I also hold a degree in radiochemistry, I am absolutely in love with space stuff, I am a father and an athlete in my personal time.

I am comfortably fluent in both **English and French**, and currently learning Dutch and German. Native Romanian from Transylvania.

Seasoned IT professional with a track record that spans from project management to business unit leadership; in 2018, my focus shifted to becoming a senior full-stack .NET developer, bearing skills that bring ideas to market with precision and innovation

Technologies I work with every day

- C#, .NET
- SQL Server
- JavaScript, TypeScript, Angular, HTML, CSS, Bootstrap
- Azure, Git via GitHub

Technologies I feel competent about

- React, NodeJS
- PostgreSQL, MongoDB
- ExpressJS, Firebase
- RabbitMQ

2022 – today: developer at iChoosr BV Netherlands

Service oriented architecture in energy transition

Daily duties include implementations of client-specific features and logic, bugfixing and refactoring, porting legacy code to newer standards with an eye on design patterns, as well as code review within the team, unit and integration tests as part of the definition of done, and deployment to Azure release pipeline.

2019 – 2022: developer at FintechOS Romania

TASS product in banking and insurance

The focus was feature-development around the business logic layer of the application with current standards and patterns as a prerequisite for the back-end application. On the frontend part, development and maintenance was done around the app presentation layer components with reusability in mind. At persistence level the focus was writing query scripts and procedures based on client specific requirements to manipulate data.

2018 – 2019: developer at Essensys Software Romania

Customer re-engagement app

This job was all about bugfixing, learning, studying and being tutored on how to become a better programmer and excel in my future career as a developer.

2013 – 2021: business unit manager at Gameloft Romania/France

SAAS product on anticheating and banning

Responsible for an international team tasked with developing, maintaining and upscaling an anticheating product for the company's AAA mobile game titles.

2007 – 2013: IAEA radiochemistry expert

CBRN monitoring app

Product manager and main chemist operator for a spectrometry windows application for environmental and civil protection CBRN fallout.
